wines, conservation and clarification of the wines, conditioning and improvement, bouquet and flavor; comparative analysis of Burgundy wines, etc.

MARC-ANTOINE PUVIS is also the author of the second treatise, dealing with different kind of techniques of fertilizing the soil. Among the different techniques an material used to amend the soil he describes liming, or treating the soil with lime to reduce acidity and improve fertility or oxygen levels., marling, using a friable earthy deposit consisting of clay and calcium carbonate, used especially as a fertilizer for soils deficient in lime, faluner, to amend poor limestone soil with falun, a sedimentary rock made up of shells debris, the use of ash, peat ash, kelp, sea fertilizer, land mix, burnt clay, or burning the soil

The third treatise, written by THOMAS JAMES THACKERAY, renowned British playwright, army officer, and agriculturist, can be considered a manual on benefits and way of use of different fertilizers, as: cattle droppings, horse urine, cow dung, guano, peat, bran, marl, salpetre and nitrate of potash, sulphate of ammonia, etc.

All the treatise included in the present collection are very rare. In detail:

Vol 1: Only one copy in Italian Libraries. WoldCat records only 7 other copies; 5 in France and 1 each in USA and UK.

Vol 2: 4 copies worldwide, 2 each in France and Switzerland

Vol 3: 6 copies worldwide, 4 in France, 1 each in UK and Canada.

BIBLIOGRAPHY: Bourquelot VI. 94. Unkwnown to Vicaire, Bitting. Oberlé
